

Year 2023-	Degree	Pranveer Singh Institute of Technology,	CPI/Percentage
Present	B.Tech	PSIT Kanpur	
2022	ClassXII(CBSE)	Kendriya Vidyalaya No 2, Delhi cantt	
2020	ClassX(CBSE)	Kendriya Vidyalaya No 2, Delhi cantt	

Achievements

- Secured Winner position at Tech Expo 2024 conducted at PSIT Kanpur for project VOKA
- Secured Winner position at Tech Expo 2025 conducted at PSIT Kanpur for AI-based assistive device VOKA
- Participated in Smart India Hackathon (SIH) and reached waitlist stage with VOKA project
- Participated in ProTech 2025 showcasing AI Companion Device for accessibility solutions
- Presented project VOCA at Tech Expo 2K24 and received recognition for innovation in assistive technology
- Participated in GDG DevFest (Google Developer Group) representing Team VOIKES

WORK EXPERIENCE

09-2025 to present	FOUNDER/CEO/DIRECTOR VOIKES TECHNOLOGIES PRIVATE LIMITED

Key Projects

VOKA - AI companion for different age group / edtech / medtech (Mar'25-Present)

Mentor: Mr. ANURAG DHAVAN, CEO - PSIT SIF , PSIT Kanpur

Objective	• To develop an AI system capable of detecting, monitoring, and evaluating real-world user events
Approach	• Developed an intelligent interaction model using AI integrated with sensor data and real-time processing • Used AutoCAD for enclosure design and generated precise prototypes using 3D printing methods • Built a pipeline for fall detection, alerting, and interaction with real-time and multi-module support
Outcome	• Distinguished real-world events and assigned system responses across multiple diverse real-time scenarios

VOXLENS - Smart glasses for deaf (Oct'25-Present)

- Built conceptual understanding in computer vision, AI & embedded systems by developing real-time assistive models using YOLO and OpenCV
- Trained and evaluated detection models using Python, OpenCV, and deep learning frameworks across object detection and scene understanding tasks
- Implemented audio feedback systems using TTS and optimized pipelines for real-time navigation and obstacle awareness
- Designed a modular assistive system for visually impaired users, achieving accurate obstacle detection and real-time environmental feedback

TrackED|PSIT Kanpur (JAN'26-Present)

- Built an AI-powered system enabling teachers to use facial recognition to instantly retrieve student details and records
- Designed modules for attendance tracking, marks management, and real-time academic performance monitoring for students
- Implemented teacher cabin interface providing access to student profiles, coordinator details, and academic information
- Developed a centralized platform for parents and teachers with secure access, real-time updates, and comprehensive student insights

AR/VR video / game dev for ISCON temple (Feb'26-Present)

- Built an immersive AR/VR experience for ISKCON temples enabling virtual darshan and interactive spiritual exploration
- Designed 3D environments and interactive modules showcasing Krishna Leela, temple architecture, and guided storytelling
- Implemented real-time user interaction, navigation, and audio-visual integration using Unity/Unreal and XR frameworks
- Developed a scalable platform delivering devotional content with immersive visuals, spatial audio, and engaging user experience

SKILLS

Programming	Python, C/C++, JavaScript	AR/VR & Game Dev	Unity, Unreal Engine, XR Development, Metahuman
CAD & Prototyping	AutoCAD, 3D Printing, Rapid Prototyping	Cloud & Integration	Twilio, IFTTT, API Integration

PATENT

PATENT FOR VOKA -UNDER VOIKES TECHNOLOGIES PVT. LTD.	Application no. 2026 ¹¹ 24414	STATUS: Applied
--	--	-----------------

Positions of Responsibility

(2024–Present)

Leadershp	• Spearheaded VOIKES Technologies, leading development across AI, hardware, and software with a growing cross-functional team • Directed planning, execution, and presentation of projects like VOKA, VoxLens, and VOCA across multiple tech expos and hackathons
Initiatives	• Developed AI-powered assistive systems integrating computer vision, IoT, and conversational AI for accessibility solutions • Built end-to-end products including fall detection systems, AI companion devices, and smart campus platforms • Participated in national-level competitions including SIH, ProTech, and GDG DevFest representing Team VOIKES
Impact	• Secured multiple wins at Tech Expo (2024, 2025) and demonstrated projects to diverse audiences including students and mentors • Engineered real-world solutions improving safety, communication, and accessibility for differently-abled and elderly users • Led product innovation from ideation to deployment, combining AI, embedded systems, and immersive technologies
